About Us

At PRV Audio, our mission is to design, create, and introduce new Pro Audio and Car Audio products that combine craft, technical knowledge, and design skills with marketing know-how.

Founded in 2006 by a Brazilian group of engineers and executives, PRV Audio started out with a compact line of transducers created for the Brazilian market, and has since grown exponentially, to become one of the most innovative manufacturers of Pro Audio and Car Audio products. In 2009, PRV Audio opened a subsidiary in Fort Lauderdale, Florida, to better serve growing international demand, and is currently present in more than 64 countries worldwide.

In early 2018, Executive Director Daniel Costa became the majority shareholder of PRV Audio Group, moving company headquarters from Sao Leopoldo, RS, Brazil to Fort Lauderdale, Florida, where today both R&D departments in Brazil, as well as production facilities around the world, are managed. Under his leadership, this energetic and passionate team is dedicated to worldwide sales, distribution, and marketing of PRV Audio products for every lifestyle.

The Research & Development Team

Based out of Brazil, PRV AUDIO's R&D team is headed by Senior Chief Engineer Acir Ozelame, and is responsible for the development of new technologies and continuous innovation of the PRV Audio Line of products, which is constantly improved based on customer feedback.

The R&D Team is also responsible for closely overseeing PRV Audio's manufacturing facilities, guaranteeing the uncompromising quality you've come to expect.

The fast growth and expansion to international markets brought the need to develop a wide variety of products for different applications, while remaining competitive in a globalized market.

PRV Audio's manufacturing had to become more dynamic to accommodate global demand, expanding meticulously to ensure consistent results by top-level factories in Brazil, China and Italy, and enabling PRV Audio to deliver only the best to the market.

Design

PRV Audio's engineers bring years of experience in many facets of the Audio Industry, and their knowledge translates to unique products. Using design tools such as Solid Edge, a 3D CAD for technical drawing, and FEMM (Finite Element Method Magnetics) to simulate the magnetic field in the loudspeaker motor, PRV Audio has pushed the limits of these tools to achieve maximum efficiency and to develop cutting-edge loudspeakers that exceed customer expectations.

Testing and Listening

Every new product is subject to meticulous testing. Unlike other companies that use measurement systems that focus their data acquisition on a single technique, PRV Audio uses CLIO 12, a multi-measure, fully integrated hardware/software platform, resulting in a significant advantage over the competition. This allows PRV Audio to provide reliable, functional, and long-lasting products that only reach the market after they have been extensively tested in the lab and on the field, guaranteeing that the PRV Audio customer will have access only to the best quality products.
